

Jousing iAED-S1 Semi-automatic defibrillator - with Adult and Child paddles

Product features:

Defibrillator type:

Accessories:

Certifications: CE EN ISO 20957-1

Batteries:

Adult plates:

Product description:

Jousing iAED-S1 Semi-automatic defibrillator - with Adult and Child paddles The iAED-S1 device is a Semi-Automatic External Defibrillator, easy to use, light, intuitive and reliable, thanks to the long battery life, 5 years or 200 shocks.

Equipped with pre-connected plates, housed in a special compartment, they allow you to have a **device that is always ready for use**. **The ease of use** makes it perfect even for people **who are not experts in IP54**

The Defibrillator, once connected to the patient, **automatically acquires and analyzes the ECG**, to detect the presence of a rhythm and in the event of cardiac arrest **it guides the operator during the rescue procedure, using Audio-Visual commands**.

If a shockable rhythm is detected, the device **charges automatically**, and the shock is delivered only when the operator presses the shock button.

The iAED-S1 device performs self-tests at daily, weekly and monthly intervals. **If it detects an error/fault state or low battery level, it alerts you through the flashing status indicator and beep sequence**. Thanks to the innovative flashing status indicator, iAED-S1 allows the user to know at any time if it is ready for use.

iAED-S1 withstands drops from 1 meter and 22 centimeters onto any edge, corner or surface. It was also designed with pinpoint precision to **resist splashes, drops and dust**. The iAED-S1 device **records operating data in internal memory**, including ECG data, events and self-test data.

The defibrillator comes with:

- LiMnO₂ battery 12V, 4.2Ah - 5 year warranty or 200 discharges
- Pair of disposable plates for adults/children (>8 years, >25Kg.)
- Rigid transport bag
- CEI 62-13 EN 60601-2-4 Verification Report
- User manual in Italian
- Declaration of conformity
- CE certified
