

Netting to stop balls for fencing sports fields, 130 mm mesh - wire Ø 2 mm

Product features:

Material: HD polyethylene

Wire diameter: 2,0 mm

Sweater: Knotted square 130 mm

Product description:

Protection sheet, fence and cover for sports fields.

Made with **high density polyethylene thread** , with a **diameter of 2 mm** , it is used to prevent the ball from leaving the playing field.

In particular, this sheet with a **130x130 mm square mesh** is suitable for **installation on football, five-a-side, volleyball and beach volleyball fields.**

Despite having a thickness of 2 mm, the **knotted thread** has a **high breaking load** , allowing the sheet to resist stress not only due to play, but also to atmospheric agents.

Given the diameter, the ball net in this version with a thickness of 2 mm is recommended not only for the lateral protection of the pitch, but also **for covering the "sky"** as it has a lower weight per square meter than other models. with greater thicknesses, it avoids the creation of unsightly "bellies".

Gana Sport recommends equipping each sheet with perimeter edging , a very thick cord that runs along the perimeter of the sheet, **reinforcing and facilitating the assembly of the net**

The cover is made to measure, as indicated by the customer.

The cost indicated is per square meter.
