

Garlando G-2000 blue table football with protruding rods

#### **Product features:**

Material: MDF (Medium Density Fiberboard)

Packaging dimensions:

Product weight:

Table football auctions: Aste Uscenti

#### **Product description:**

The **Garlando G-2000 table football with extending rods** is a professional model in a new look.

The **MDF cabinet** has a blue melamine coating and a thickness of 2.5 cm to give the structure excellent sturdiness.

The **legs** are in MDF with melamine coating. The considerable thickness - 4 centimeters - guarantees the furniture perfect stability on the ground. Adjustable feet for leveling the playing surface on uneven floors are available on request.

The **rods** have a diameter of 16 mm, in drawn steel, with high resistance to torsion and anti-rust chrome plating. The quality of the material used, together with the thickness of 2.2 millimetres, prevents the temples from bending, maintaining a perfect shape for a long time.

**Safety device for the rods** (telescopic rods): upon request it is possible to supply the table football with telescopic safety rods to replace the outgoing ones. Made of the same material and with the same technical characteristics as the outgoing ones, they differ in their operation, which ensures the maximum level of safety.

In **telescopic rods**, a smaller diameter rod slides inside the rod with the players, the end of which reenters the furniture without coming out, thus avoiding the risk of hitting children's faces and eyes.

The rods are fixed to the furniture using nylon bushings.

Single-colored **figures** in plastic material (moplen) representing a stylized human figure, fixed to the rods with direct molding: they do not move, they do not move, they maintain their position perfectly. Team colours: red and blue.

The steel **ball bearings** inside the bushings significantly improve the smoothness of the shafts: it increases the speed, and therefore the pleasantness, of the game, while reducing the stress on the players' wrists.

The **playing field** is made of tempered glass (5 mm thick) with a grass green background and white lines that reproduce the stadium ground.

Insertion of balls onto the pitch via **two outlets on the sides of the table football table** .

The recovery of the balls in the goal, simple and immediate, occurs manually through an opening on one side of the table football with aluminum finish.

**Abacus** scoreboard, with cubes in colors coordinated with the little men.

Supplied with 10 white Standard model balls

**This table football maintains an excellent quality/price ratio**
