

Garlando Olympic Outdoor Table Football with outgoing rods

Product features:

Material: 3 cm multilayer plywood

Packaging dimensions:

Product weight:

Table football auctions: Aste Uscenti

Playing field:

Product description:

The **Garlando Olympic Outdoor football table with protruding rods** is built entirely with materials and components resistant to atmospheric agents: marine plywood cabinet, water-repellent glues and anti-rust treated steel components.

The **cabinet** is constructed of multi-layer marine plywood and covered in plastic laminate, both water-resistant and glued together with a special non-water-soluble glue. The robustness of the materials used and the 3 centimeter thickness make the structure extremely resistant. Color: iridescent blue upper band, iridescent blue lower band.

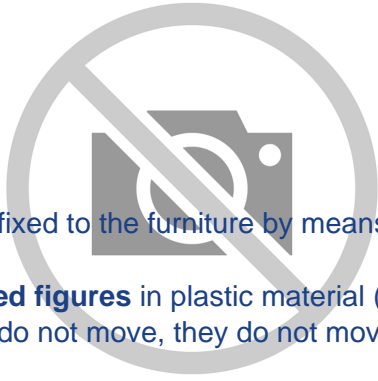

The structure of the furniture is assembled by means of a system of metal hinges secured by screws and bolts, without the use of glues which would make it difficult to replace parts.

The legs are made of rain-resistant epoxy powder coated metal which guarantee perfect stability on the ground.

The **rods**, with diameter mm. 16 in steel, they are made of drawn steel with high resistance to torsion with anti-rust chrome plating. The quality of the material used, together with the thickness of 2.2 millimetres, prevents the temples from bending, maintaining a perfect shape for a long time.

Safety device for the rods (telescopic rods): upon request it is possible to supply the table football with telescopic safety rods to replace the outgoing ones. Made of the same material and with the same technical characteristics as the outgoing ones, they differ in their operation, which ensures the maximum level of safety.

In **telescopic rods**, a smaller diameter rod slides inside the rod with the players, the end of which reenters the furniture without coming out, thus avoiding the risk of hitting children's faces and eyes.

The rods are fixed to the furniture by means of nylon flanges containing a ball bearing.

Single-colored figures in plastic material (moplen) representing a stylized human figure, fixed to the rods with direct molding: they do not move, they do not move, they maintain their position perfectly. Team colours: red / blue.

The rust-proof stainless steel **ball bearings** inside the bushings significantly improve the smoothness of the shafts: it increases the speed, and therefore the pleasantness, of the game, while reducing the stress on the players' wrists.

Olympic Outdoor has the goalkeeper who rotates freely 360 degrees: scoring goals is easier.

The playing **field** is made of grass green plastic laminate and white lines that reproduce the stadium ground, screen-printed with special non-water-soluble inks: they do not fade in the sun and are not afraid of humidity.

The **introduction of the balls** into the field occurs manually by means of an elevator placed on the side of the cabinet next to the coin acceptor. The system is not accessible from the outside, to prevent the balls from being stolen.

The outside of the goals is covered in aluzinc, a very robust aluminum and zinc alloy that prevents the formation of dents even after numerous matches.

The **playing area** is completely covered by a tempered upper glass which muffles the noise of the game and makes any tampering during the game impossible, at the same time preventing the possibility of the ball escaping from the playing area.

Furthermore, it is possible **to open the cabinet** to access its interior. A wooden support supports the upper part of the football table when it is raised.

With the cabinet open, the playing field can be separated from the upper part of the cabinet by opening two latches, to facilitate cleaning and the possible replacement of parts. The internal mechanism for sliding the balls is made up of individually replaceable metal elements.

Abacus scoreboard, with cubes in colors coordinated with the little men.

The **drink holders** (on both sides of the cabinet) for storing glasses, bottles and cans complete the range of accessories of this model.

Olympic Outdoor is equipped as standard with a **mechanical pull coin acceptor**, adjustable for any type of coin or token, which releases all the balls at the same time. The following mechanical coin acceptor options are available upon request: coin acceptor with match counter, coin acceptor with protected match counter, coin acceptor with protected match counter and ejector.

Olympic Outdoor can also be supplied with the coin acceptor disabled for free play.

Supplied with 10 white Standard model orange balls.

This table football maintains an excellent quality/price ratio
